Art and Wilderness
Institute
is a community
centered
Institute
focused on getting
the community
re-connected
with Nature.

We are based in
Southern CA
and believe
that by Exploring,
Creating,
and Connecting,
we grow
as people and
as community.

All of our programs
aim at incorporating
service-learning
in order to give back
to our local
communities
and the world.

Nature Quote

"It is He who has made you successors upon the Earth"
Surat Al-Baqarah [2:30]

Humans are considered stewards of the Earth, responsible for its care.

October Trait

October's character trait is self discipline

In school:

- I come to class prepared
- I follow directions
- I listen with my ears and my eyes

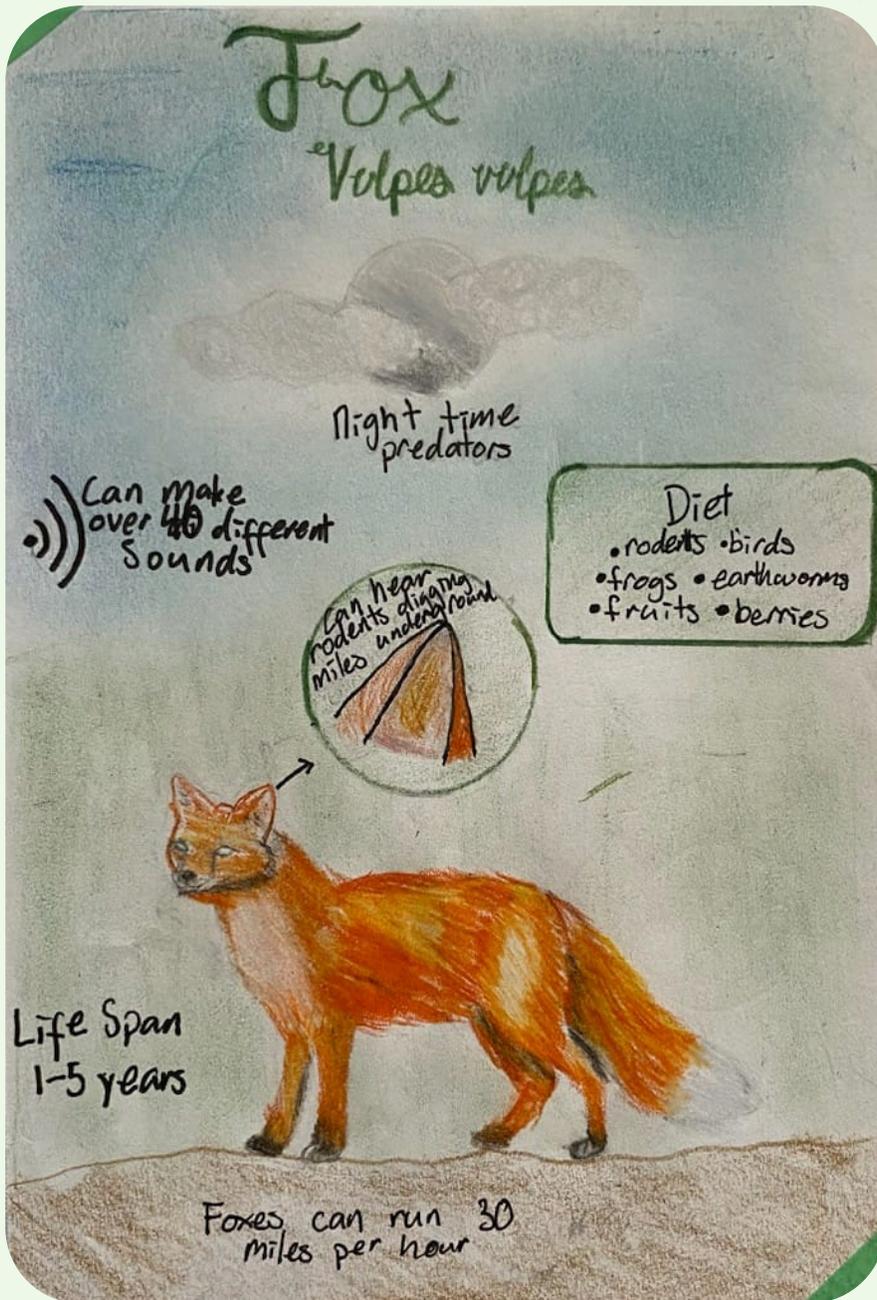

With people:

- I think before I speak
- I allow others to talk before me
- I am calm when someone is mean
- I use my words and not my hands

With myself:

- I know when to stop
- I know when to keep going
- I build my habit muscle

THE FIRST DAY OF MENTORSHIP

Sept. 12, 2024

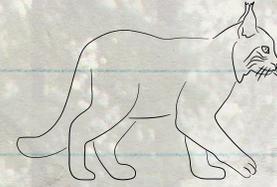

by Waleed Khalife

We were at Carbon Canyon Park and started the day with 10 pushups which sounded weird but we did. After that Ms. Sama asked us, “What are our goals this year?” We told Ms. Sama our goals for the year. (Mine was to win the trading card contest.) When we were waiting for everybody to come Ms. Sama told the rules for mentorship. After everybody came, we headed to the trail.

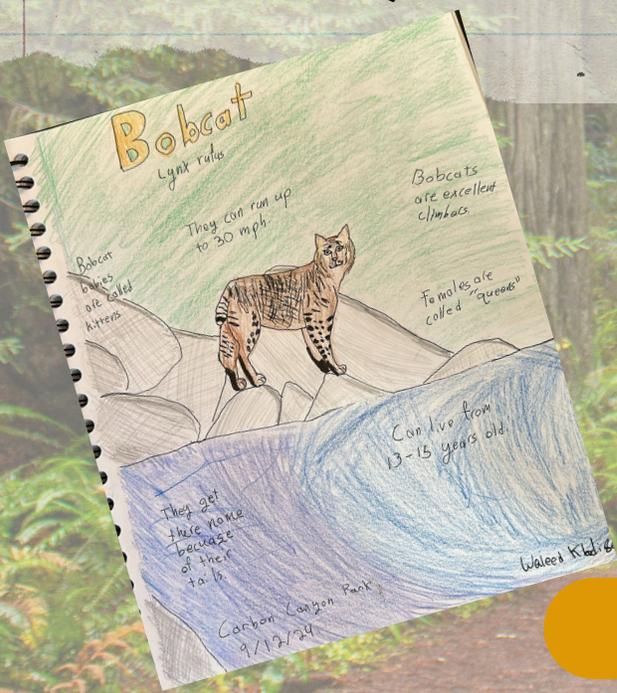

Ms. Sama had a game in which she pointed to a plant and we had to guess what it was and it was 1st year mentorship students against 2nd year mentorship students. We got the first point and the answer was mule fat. And she told us facts about it like, you can make bows and arrows out of it because it is very straight, when mules stopped to drink water they ate the leaves and for some reason it made them fat, and it is a tattle tale plant because it tells that there is water close by.

Then we walked some more and we saw a run. Ms. Sama explained that animals go in and out in the same area then it naturally forms. We looked in there and we first saw canine footprints one was bigger than the other so Ms. Sama said, "Two different animals use this run, a coyote and fox."

After we backed away a bit we saw a different paw print. It was a bobcat's footprint. When we were walking we saw a scat. Ms. Sama said that they are from a mountain lion. After that we started heading to the redwoods and when we were heading there we saw some interesting plants like poison hemlock and castor beans. She also told us interesting facts like there is a chemical in the castor bean called ricin that could kill you if you ate it. I remembered when we saw the mountain lion scat and the bobcat footprints and asked Ms. Sama, "Since we saw mountain lion scat does that mean I can draw a mountain lion." She said yes. (If you were wondering why I asked, it is because that is my dream animal to draw) After a bit we finally arrived at the redwood forest.

I actually drew a Bobcat instead.

Try to Find Me!

We first ate for ten minutes then we wrote as much as we knew about the plants that we saw that day. After that we learned how to draw a realistic redwood tree. Then we played something kind of like hide and seek but different. Ms. Sama had to hide and we needed to find her, but you have to spread out. And if you find Ms. Sama you have to hide with her until there is one person left.

Ms. Sama said, I could be anywhere in the whole redwood forest, but if she whistles we have to come back. After she explained how to play the game, we counted to 100 and looked for her. Since she said, "I could be anywhere in the redwood forest," we thought she would be in the farthest part of the redwood forest. So, we ran there first, but we couldn't find her. Then, we went back where we heard Ms. Sama making a hooting noise. We thought it was the whistle so we went back and looked in the bush we thought we heard Ms. Sama whistled. Then somebody shouted, "Here you are!" So we all ran over and saw her, but the student wasn't supposed to shout. We explained, when she whistled, she made the whistling sound like the sound she made, so Ms. Sama said, "it is a tie."

We got ready to head back and when we were walking Ms. Sama saw an owl feather and she asked, "What kind of owl feather is that?" I said, "A great horned owl feather," and Ms. Sama gave me the feather because I was correct. And we went back and Ms. Sama told me what my homework was. Then we arrived and huddled. The word of the day was "Mule fat makes mules fat." After our break we headed back to the cars.

I thought I was looking pretty good

Sea Otters

By Nura Soliman

We eat, sleep, mate, and are born and raised in
the water.

We are not big talkers.

Now listen up,

See what I shall say,

We love to play,

We love to groom,

And we never give each other room!

What's for lunch?

Urchins, crabs, and clams.

I open them using a rock then ...

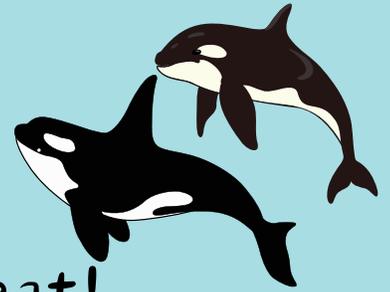

BAM!!!

Poems: Sea Otters [continued]

Who eats us?

Evil Killer whales.

Meat, that's what they eat!

Anyway, we love to cuddle, we love to snuggle,

We hold hands at night,

Too sleepy to fight.

During the day we hunt for food,

Even if we are in a bad mood.

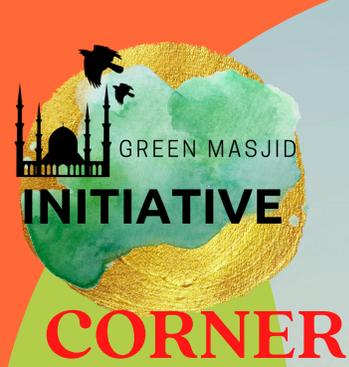

Don't mess with us,

Or we will make a big fuss!

We are very intelligent.

We are magnificent!!!

The Art of Gardening, A Leadership Guide

with Hasan Hboubati

If you're reading this, then you should be aware of my bias for drawing inspiration from nature.

Today, I want to impart a thought-provoking observation on the striking parallels between leadership and gardening.

In their unique ways, both leadership and gardening require a delicate blend of vision, nurturing, and resilience. How, you might ask? Let's explore this analogy through how we built the Enterprise Land team at Alteryx.

vision

nurturing

resilience

The Enterprise Land team had humble beginnings before it matured into a prolific force of 16 Sales Engineers and two managers, each a logo-hungry hunter with a passion for acquiring new business. Notably, this team recorded the highest employee satisfaction score within the company – a testament to strategic cultivation (pun intended).

Here's How We Did It:

1. Planting seeds:

Leaders are like gardeners who sow seeds of vision, ideas, and values within their teams. Setting up the Enterprise Land team required an intentional strategy of choosing the right seeds for the soil. This initial process involved the selection of hungry individuals with the right skills and growth potential. Some of whom have never sold software before.

2. Providing the Right Environment:

Just as plants thrive in suitable conditions with sunshine, water, and nourishing soil, teams prosper in a supportive environment bolstered by resources and encouragement. Establishing a culture conducive to creativity and growth is a leader's obligation. It's analogous to my experience with a withering fig tree, which sprang back to life simply because I moved it to a more favorable location.

3. Nurturing Growth:

A gardener sustainably maintains a garden through consistent watering, weeding, and pruning. In a similar vein, it's a leader's duty to offer ongoing support, feedback, and developmental opportunities to team members, while swiftly (and I mean swiftly) resolving any arising issues.

SUPPORT

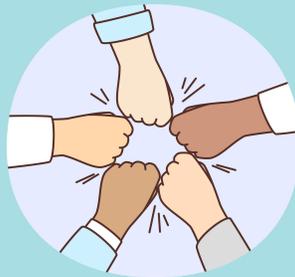

4. Dealing with Challenges and Uncertainty:

Gardeners encounter impediments such as pests, inclement weather, or unforeseen changes in the environment. In leadership, challenges might manifest as organizational changes, internal conflicts, strategy shifts, or competing priorities. When Alteryx was going through hypergrowth, every day presented a new challenge. Mastery in conflict resolution and adaptability were indispensable for the team's success.

5. Sowing Diversity:

A diverse garden is invariably more robust and resilient. Leaders who have the foresight to cultivate teams composed of varied backgrounds, experiences, and skills introduce new perspectives that help fortify the team's creativity and problem-solving capabilities. The value of diversity cannot be underestimated. I am very proud and grateful for having had the opportunity to establish such a diverse team.

6. Reaping the Rewards:

A thriving garden bears a fruitful harvest – a direct mirror to a well-led team that accomplishes its goals and contributes enormously to the organization's success. It was extremely gratifying to see what the team was able to achieve. Several original members of the Enterprise Land team have since assumed more significant roles, both within Alteryx and elsewhere.

Having lived and seen this firsthand, I know the joy a gardener experiences in nurturing a flourishing garden mirrors a leader's fulfillment in seeing a team reach its full potential. By embodying the principles of patience, care, and adaptability, leaders can foster equally rewarding and harmonious team environments. The rewards of such dedication, whether extended to plants or people, are bountiful and deeply satisfying.

KIDTOGRAPHY SOCIETY

In nature's embrace, we find our way,
With cameras in hand, we greet the day.
Kids and friends, a joyful band,
Exploring the wonders of this vast land.

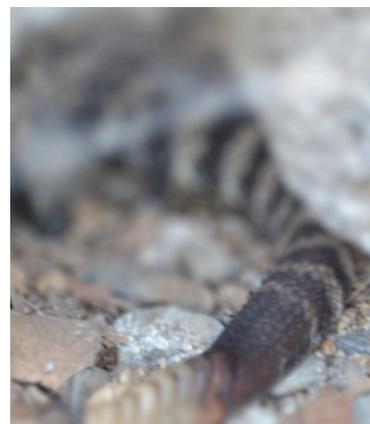

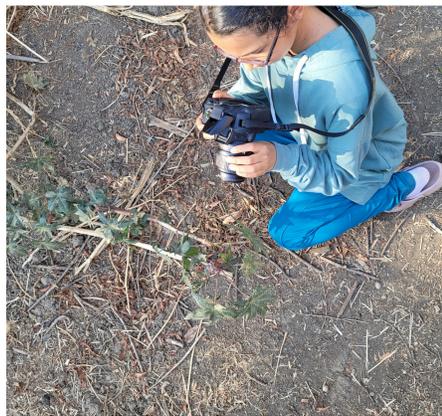

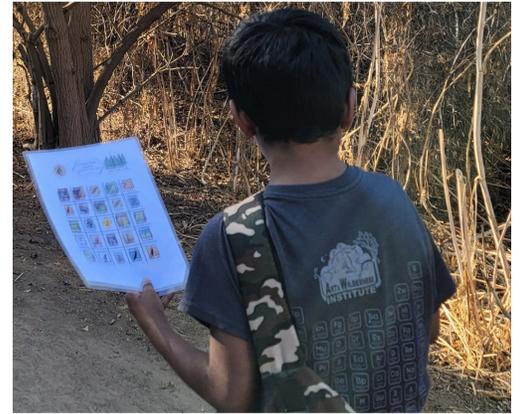

Through forests deep and meadows wide,
We seek the secrets nature hides.
With every step, a new surprise,
In the dance of leaves and the flight of butterflies.

Scavenger hunts, a thrilling quest,
To find the treasures nature's blessed.
A feather here, a footprint there,
Each discovery, a memory to share.

Photo competitions, friendly and bright,
Capturing moments in the perfect light.
Plants and animals, our subjects true,
In every shot, a story anew.

We focus on the flora, the fauna, the sky,
Preserving knowledge as the days go by.
In nature's classroom, we learn and grow,
With every click, our love does show.

So let us wander, let us see,
The beauty of the world, wild and free.
With kids and friends, our hearts aligned,
In nature's splendor, peace we find.

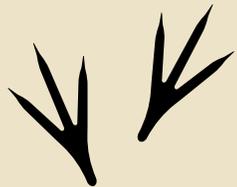

Wilderness Awareness Day

by Ibrahim Dada

- WILDLIFE TALKS
- ARCHERY
- WILDLIFE TRACKING
- FOOD

Wilderness Awareness Day was a blast! There was Ms. Sama's talk about tracking animals and being stewards of the earth.

Mr. Raef spoke about how hunting works. He explained what happens when people over-hunt and how it effects the environment.

[Go search: "how the wolves changed the river" on youtube](#)

The speeches and presentations were interesting. There were also bake sales, face painting, and an ICYL table for fundraising for Gaza and Lebanon. Ms. Dana even brought her chicken to teach us about animal care.

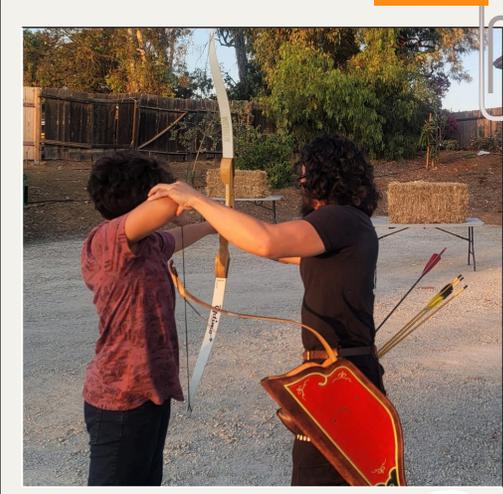

Afterwards, there was Archery and everybody was there shooting at the haybales. We had an Archery demonstration from two AWI volunteers, Mariam and Fatimah Wingate and a special demonstration from Coach Abu from East Meets West Fitness. Everyone had a great time learning about how to shoot with a bow and arrow for the very first time.

Overall, the whole event was pretty great! Thank you Islamic Center of Yorba Linda for hosting it!

PRICKLY PEAR CACTUS DRINK

BY: NURA KHAN

DIRECTIONS:

Step one:

Prepare the fruit by cutting both ends of the prickly pear fruit, peeling away the skin to reveal the fruit inside and scrape off the flesh and chop it finely

Step two:

Blend in food processor or hand blender

Step three:

Strain the liquid away from the seeds

Step four:

Add sparkling water, honey, and lime

Step five:

Mix everything together until completely mixed

Step six:

Enjoy over ice!

Ingredients:
4-5 Prickly Pear Fruit
Sparkling Water
Lime
Honey (or sweetener of your choice)

Did you know?

Prickly pear cactus fruit can prevent cancer and helps those with diabetes!

ISA JOKE

by Isa Dada

What do you call a bear caught in a spring shower?

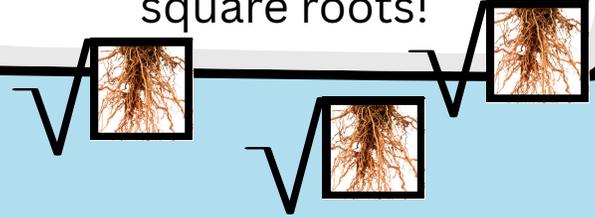

Drizzly bear.

Why do plants hate math?

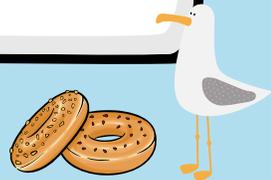

Because it gives them square roots!

Why don't seagulls fly over the bay?

Because then they'd be bagels.

Why did the snail paint an "S" on its car?

SNAILED IT

So everyone would say, "Look at that S-car-go!"
